AI-powered Contrast Enhancement for Brain MRI

LIFE FROM INSIDE

AiMIFY is

Innovation

Because:

- **is the first FDA cleared and CE (MDR) marked** AI software of its kind
- **recognizes** brain tissue up-taking contrast
- **selectively amplifies** contrast enhancement **up to two¹ times***

* the contrast enhancement obtained with a labeled dose of the GBCA.

1. Pasumarthi S. et al. 2025 (Preprint)

PRE-CONTRAST

POST-CONTRAST

AiMIFY

Virtual relaxivity

Because:

- increases **small and large** contrast-enhancing **lesions visibility¹**
- by improving **image quality** metrics*
- without changing the **standard of image acquisition**

* Contrast-to-noise ratio (CNR), contrast enhancement percentage (CEP), lesion-to-brain ration (LBR).

Seamless integration in your workflow

1 ANY scanner

2 SubtleEDGE

3 PACS/
Workstation

4 Reading

Virtual dose flexibility

Because:

- delivers **high-dose-like** appearance, on demand
- offers a potentially **safer alternative** to higher Gd doses
- **doesn't interfere** with image acquisition
