LUNCH SYMPOSIUM
You are invited!

ECR 2026
Vienna, Austria
Friday, March 6th, 2026
12:30-13:30
Room N (Level 1)

Seeing the Whole Picture: Multimodal Imaging of Incidental Liver Lesions

Moderator: Prof. Valérie Vilgrain

Incidental Liver Lesions: Role of Contrast Enhanced Ultrasound (CEUS)
Prof. Teresa Fontanilla Echeveste

Incidental Liver Lesions: Role of CT
Dr. Asunción Torregrosa Andrés

Incidental Liver Lesions: Role of MRI
Prof. Maria Antonietta Bali

Faculty
Prof. Valérie Vilgrain
(Paris, France)
Prof. Teresa Fontanilla Echeveste
(Madrid, Spain)
Dr. Asunción Torregrosa Andrés
(Valencia, Spain)
Prof. Maria Antonietta Bali
(Rome, Italy)

This program will also be available 24 hrs after live streaming on
https://connect.myesr.org/

General description

The purpose of this symposium is to highlight the integration of Contrast-Enhanced Ultrasound (CEUS), Magnetic Resonance Imaging (MRI), and Computed Tomography (CT) in the characterization of liver incidental lesions. By analyzing the strengths and limitations of each imaging modality, the symposium aims to provide a comprehensive understanding of how these techniques can complement each other in clinical practice.

The event is structured into focused presentations that explore the role of each modality, alongside in-depth discussions on their respective advantages and challenges. Each presentation will be enriched with real-world case studies that demonstrate the practical applications of these imaging modalities in different clinical scenarios and their integration. Through collaborative discussions, the speakers Teresa Fontanilla, Asunción Torregrosa, Maria Antonietta Bali, and the moderator Valérie Vilgrain will provide valuable insights into how integrating these methodologies can optimize diagnostic accuracy and enhance patient care. The symposium encourages interdisciplinary dialogue among radiologists and clinicians, fostering a collaborative approach to managing incidental findings.
