

LIFE FROM INSIDE

Sustainability at the core of our **growth**

Bracco at a glance

We are a global leader in diagnostic imaging. We offer a comprehensive range of evidence-based imaging agents, procedures, and devices. Our contrast media solutions are available in over 100 countries. As an accredited healthcare provider, we know what it means to put patient care first.

“Our purpose is to improve people’s lives by shaping the future of prevention and precision imaging. For close to a century, we have pursued that by putting our solutions, values and expertise at the service of patients and healthcare professionals. Achieving this purpose also means caring for the health of our planet. That’s why sustainability is not a side effort - it’s at the heart of our growth strategy.”

Diana Bracco
President and CEO
Bracco Group

Fulvio Renoldi Bracco
Vice President and CEO

Our journey toward sustainable diagnostics

We're committed to making diagnostics work better for patients, better for health systems and the professionals that work within them, and better for the planet.

This document shows where we're heading. **Let's share the journey.**

INNOVATION

We're developing technologies to push the frontiers of diagnostic imaging for patients and radiologists.

SUSTAINABILITY

We're working to reduce the environmental impacts of our products and our operations.

EDUCATION

We're investing in the skills and development of today's healthcare professionals and those of tomorrow.

INNOVATION

Pushing the frontiers of imaging

Our approach

We are working to push the frontiers of diagnostic imaging by **investing in our own R&D** and by working in close collaboration with partners and stakeholders across the value chain to unlock new solutions. Our aims are to increase the quality of patient diagnostics, enable more efficient operations and drive sustainability across the lifecycle of our products.

How we're doing

10%
of our revenues are invested back into R&D

2,200+
Patents granted globally in Bracco's portfolio

“With AI support, we are redefining what is possible in radiology.”

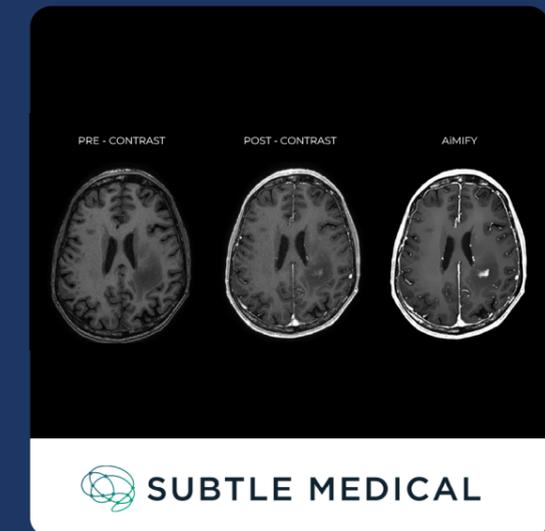

Elena Magalotti, Global Brand Manager, Contrast Management & Digital Health, Bracco Imaging

AiMIFY: a new AI-powered software to “boost” diagnostic confidence

AiMIFY uses AI-powered software to significantly enhance magnetic resonance imaging (MRI) of the brain, particularly for detecting small and poorly enhanced lesions. The product was developed through a collaboration between Bracco Diagnostics and Subtle Medical. It received FDA clearance as Class II software as a medical device (SaMD) for magnetic resonance imaging (MRI) of the brain. Better highlighting of small, poorly enhancing lesions and improved overall image quality are key factors in more confident and accurate diagnosis, and more informed decision-making on possible treatment. The software can help reduce brain re-scans, thus avoiding administering additional doses of contrast media. Learn more at the Bracco Sustainability Report (p. 49): bracco.com/sustainability

Growing Responsibly: Reducing Our Environmental Impact

Our approach

We aim to significantly **reduce our environmental impact as we grow**. We are committed to carbon neutral operations by 2030 and we are integrating circular practices into every aspect of our work - from packaging to the recovery of iodinated and gadolinium-based contrast media.

How we're doing

70% less CO₂e
Emissions reduction in Bracco operations through implemented or approved actions by 2030 (on 2014 baseline)

-36% waste to landfill
The drop in the amount of waste we sent to landfill in 2024 vs. 2023

“Our aim is to significantly reduce the environmental footprint of medical imaging.”

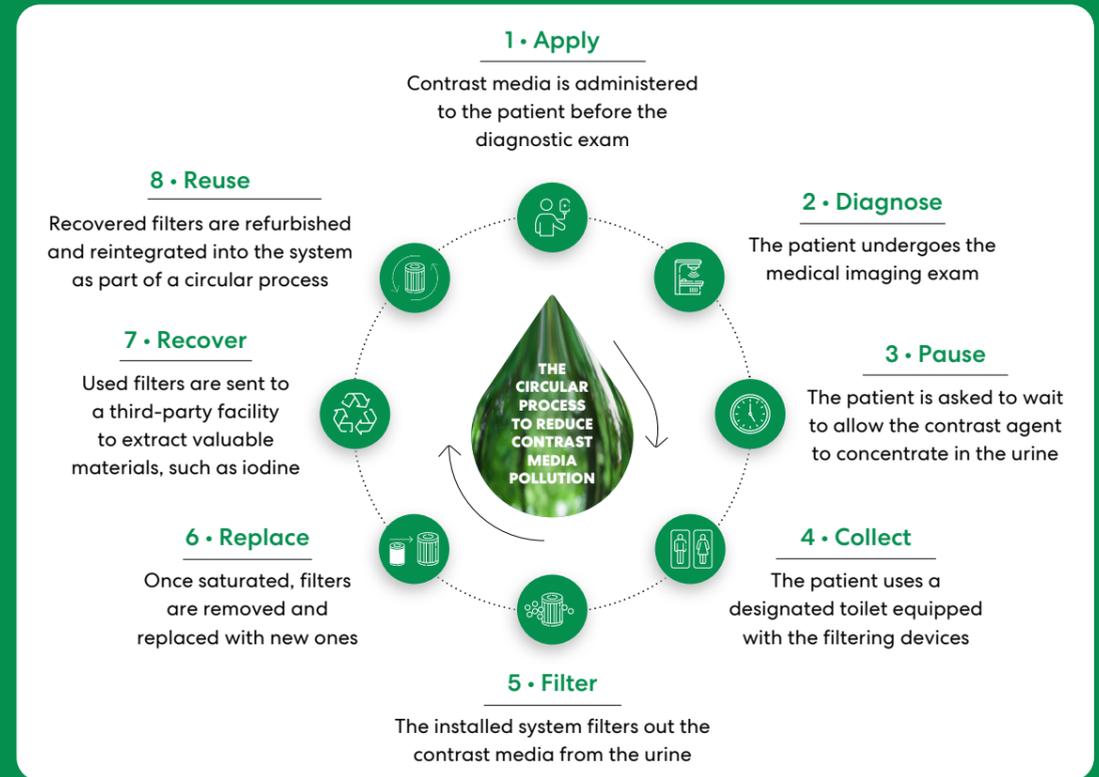

Erik Bruno, R&D Sustainability and Packaging Innovation Manager, Bracco Imaging

Sustainability starts with capturing iodine

Re.Water is a project that brings together Bracco, Zereau (a company specialized in wastewater treatment technology), hospitals and patients to enable the collection and filtration of contrast media from patients following CT and MRI diagnostic procedures. The project is rolling out in leading hospitals, reducing environmental impact without changing clinical workflows.

Advancing the future of diagnostic imaging education

Our approach

Our investments in education and training for radiologists, healthcare professionals and students aim **to support quality, access to diagnostics and strengthen the foundations of health systems**. We aim to reach 130,000 people in targeted training projects by 2027 and promote STEM education within our local communities.

Bracco Global Academy

2,420 USERS	150+ EDUCATIONAL CONTENTS	14 COUNTRIES INVOLVED	EDUCATION IMPACT Investing beyond our organization multiplies positive impact. A growing community working together to raise standards of care.
-----------------------	-------------------------------------	---------------------------------	---

“The most impactful and valuable experience was the opportunity to have structured mentoring and a hands-on approach in a highly qualified training center.”

Natia Burjanadze, Bracco Fellow, ESOR Visiting Scholarship Program in Urogenital Radiology at Innsbruck University Hospital

Next Gen initiative

We are strengthening our focus on the Next Gen initiative and expanding beyond our existing partnerships with scientific societies like the European School of Radiology (ESOR) and the Radiological Society of North America (RSNA).

The Next Gen initiative aims to include direct collaboration with “Next Gen” experts via partnerships with Young Clubs of the European Society of Radiology (ESR), European Society of Neuroradiology (ESNR), European Society of Cardiovascular Radiology (ESCR), and ESUSOBI at the regional level.

Through support for gatherings such as the European Society of Radiology Congress we seek to create a platform for emerging leaders to share their views on cutting edge themes such as the impact of AI on radiology and the evolution of medical education.
